

COMMUNITY DEVELOPMENT DEPARTMENT

The Los Angeles World Airports (LAWA) Public Hearing for the Draft Environmental Assessment and Draft General Conformity Determination for the LAX Airfield and Terminal Modernization Project (ATMP)

On June 29, City staff attended a virtual public meeting hosted by LAWA. LAWA staff presented the ATMP, provided an overview of the project’s environmental assessment, and presented the General Conformity Determination and Historic Preservation Act findings. As previously reported, the ATMP at LAX proposes to construct a new aerial roadway, a new concourse next to Terminal 1, and a new terminal (Terminal 9) with improvements to the North Airfield. LAWA subsequently opened the public hearing and took oral comments from the public. The public comments mainly centered on the local and regional aircraft noise/pollution impacts and the projected increase in passenger trips to/from LAX without dispersing air traffic to other airports. The City of Rancho Palos Verdes had also expressed these concerns in a comment letter on the Draft Environmental Impact Report (DEIR) for the LAX ATMP (attached). LAWA will now begin preparing responses to the public’s oral and written comments, including the City’s comment letter, in a Final Environmental Assessment.

Airfield & Terminal Modernization Project
